

WIRE EDM - MV1200-S

We had never investigated wire EDM as a viable process to make our parts.

WSM and Mitsubishi have demonstrated to us, after 18 months of skepticism, that their way was going to be a lot more profitable, more accurate, and could help us at least double our production with less people.

After our learning curve, we made tremendous progress in our turnaround time and are now able to offer many more services to our customers by making better parts for them more economically.

We now have 3 EDM Machines (2 wire, 1 Sinker) and are looking how to fit a third wire EDM machine in our shop. Mitsubishi/MC Machinery and WSM technology have been the best thing that happen to our shop, we like to the thank their staff for their reliability, fast and effective customer support for either application or service.

Q/A from a prospect to a new Mitsubishi customer

(By email)

Q: *Are you satisfied with the machine?*

A: Yes, the machine runs / threads very well.

Q: *Did WSM "do" what they said they would do?*

A: Yes, above and beyond expectations actually: Probably some of the best service we've had on any of our machines (Anything from ordering wire to having a question).

Q: *How did the installation go? Was it seamless?*

A: Yes I believe it took 2 days and we were up and running

Q: *Did you require any training at WSM? If so how did that go? How many in the class?*

A: We were actually too busy at the time to go for training. We have 5 Fanucs and were familiar enough with running wires that we did a 1 day onsite training and that was good enough for us.

**Randy Pierzchala,
Pier Tool & Die**

FYI, the Prospect running a medical company did purchase a Mitsubishi MV1200S wire EDM
